*These publications were included prior to the 2017 policy

**These publications are included in the pre-2019 ABDC Index

JCR Impact Factor: The Journal Citation Report (JCR) is published by Clarivate Analytics. The JCR impact factor is a measure of the frequency with which the average article in a journal has been cited in a particular year. <https://mjl.clarivate.com/home>

Google Scholar (h5-Index): Google Scholar's h-index of a faculty is defined as follows: "the largest number 'h' such that at least 'h' PRJs were cited at least 'h' times." For example, if Dr. Smith has a Google Scholar h-index of 5, this means that five of Dr. Smith's PRJs were cited at least 5 times each over the period. In particular, the h5-index is the h-index for articles published in the last 5 complete years. It is the largest number h such that h articles published in the last five years have at least h citations each. https://scholar.google.com/citations?view_op=top_venues&hl=en&vq=en

ABDC Rating: The Australian Business Deans Council regularly publishes the ABDC Journal Quality List (<https://abdc.edu.au/research/abdc-journal-quality-list/>). There are four categories of quality, including:

- A*: this is the highest quality category, and indicatively represents approx. the top 5-7% of the journals assigned to the given primary Field of Research (FoR) panel.
- A: this is the second highest quality category, and indicatively represents approximately the next 15-25% of the journals assigned to the given primary FoR panel.
- B: this is the third highest quality category, and indicatively represents approximately the next 35-40% of the journals assigned to the given primary FoR group.
- C: this is the fourth highest quality category, and represents the remaining recognized quality journals assigned to the given primary FoR panel. ****All inclusions to the College of Business Journal List will be made initially at the C level.*

Cabell's Acceptance Rate: Cabell's provides a respected and recognized Whitelist of acceptable journals and associated acceptance rates.

SJR h-index: SCImago Journal & Country Rank (SJR) is a publicly available portal that includes the journals and country scientific indicators developed from the information contained in the Scopus® database (Elsevier B.V.). These indicators can be used to assess and analyze scientific domains. The h-index expresses the journal's number of articles (h) that have received at least h citations. It quantifies both journal scientific productivity and scientific impact and it is also applicable to scientists, countries, etc. <https://www.scimagojr.com/journalrank.php>
