Abstract

The goal of the project was to determine if the academic and social circumstance of the COVID-19 pandemic affected grades at Georgia College and State University in any way. The data was collected from the GCSU Grade Distribution Database and the GCSU Merits website. The scope of the analysis was primarily focused on the most popular courses at GCSU from Spring of 2018 through Spring of 2021. The consequences of this project are not only topical but also immediately relevant to the procedures of academic learning in the face of a global pandemic. We can answer the question of if what was done would suffice if a future emergency were to occur that would warrant the need of at-a-distance and or hybridized learning. We compared grade distribution before and after the COVID breakout for different courses based on department, major, and level (1000, 2000, 3000, 4000). In this project, we have found that the Spring 2020 semester has multiple significant discrepancies, compared to other spring semesters.

Introduction

Here are some important historical differences to keep in mind:

Spring 2020: At Georgia College, and many other universities, half of this semester was business as usual. In mid to late march, half way through the semester, COVID-19 started spreading quickly around the United States, while we went on spring break. The public universities of Georgia decided to extend spring break another week so that they could prepare to have their very first fully online experience. Many professors had never used this technology and the last half of the semester was very difficult for learning and grading. Most professors did not know how to utilize their resources and prevent cheating.

Fall 2020: After the second half of spring 2020, and an entire summer semester, Georgia College had it's first hybrid semester. Some classes were fully in person(with social distancing measures in place), hybridized(meet in class sometimes and online other times), or fully online.

Spring 2021: This semester was similar to Fall 2020, but most classes started weaning back to fully in person.

The data analyzed came from Georgia College's Grade Distribution Database, and the GCmerit website listed here; <https://gcsu.meritpages.com/>

The scope of the analysis was primarily focused on the most popular undergraduate courses at GCSU from spring of 2018 through spring of 2021. Since Georgia College has approximately 7000 students, popular classes were categorized as those who gave several hundred grades a semester. The classes tracked are the subject abbreviations below.

```
## [1] "MATH" "PHYS" "CHEM" "BIOL" "PSYC" "MUSC" "PHIL" "NRS" "ACCT" "ECON"
## [11] "CSCI" "BCOM" "ENGL" "GC1Y" "GC2Y" "KINS" "HIST" "MGMT" "MKTG"
```

Among these classes, we observed the percentage of A, WI, DF, and ABC grades given. The compound variables WI, DF, and ABC are defined as:

$$WI = W + I$$

$$DF = D + F$$

$$ABC = A + B + C$$

Where A is the percentage of A grades given, B, C, D, and F are likewise. The W and I variables are the percentage of withdrawals and incomplete grades respectively.

After the general analysis, we analyzed the grade variables above in different levels to see if there was any significant difference. The levels were LL, UL, STEM, LA, BC, MC. These are defined as lower level, upper level, STEM classes, Liberal Arts classes, Business Classes, and Medical Classes respectively. More specifically;

$$LL = 1000Level + 2000Level$$

$$UL = 3000Level + 4000Level$$

$$STEM = PHYS + MATH + CHEM + CSCI$$

$$LA = HIST + ENGL + PSYC + MUSC + PHIL$$

$$BC = ECON + MGMT + MKTG + BCOM + ACCT$$

$$MC = BIOL + KINS + NRS$$

Though they share many classes, the spring and fall semesters have too many differences to be compared fairly. Therefore in all the analysis, each spring term was compared only to other spring terms. Likewise for fall. All significance test were performed at the 5% significance level.

Analysis of A grades

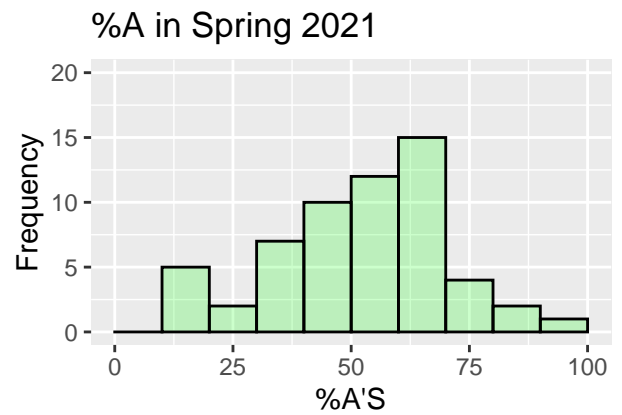

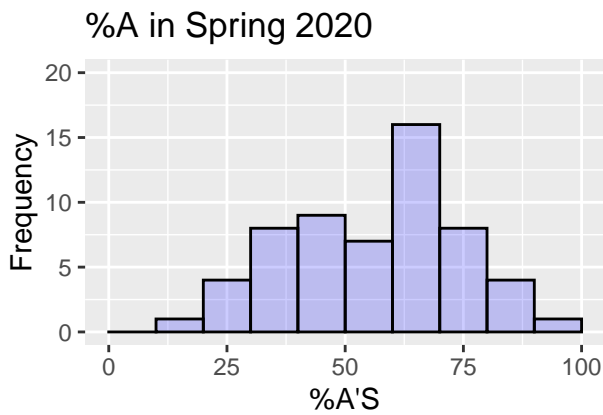

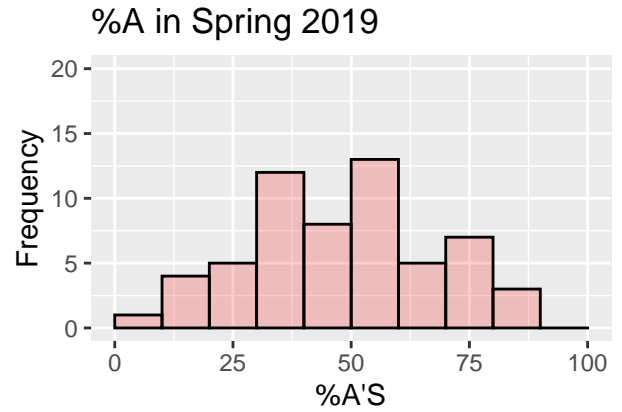

In the overall distribution of grades from the classes observed, we found a significant increase in A's from spring semesters before the pandemic to the spring 2020 semester.

Spring A

```
##           Df Sum Sq Mean Sq F value Pr(>F)
## ind           2   3982  1991.1    5.621 0.00414 **

## Max.      :84.90    Max.      :95.90    Max.      :100.00
## NA's     :37       NA's     :94       NA's     :94
```

Observe the almost 10% increase in percentage of A grades given in 2020 as compared to the averaged 2018 and 2019. This shows there were significantly more A grades given in spring 2020 as compared to before the pandemic, with the percentage of A's coming back down a little in Spring 2021. Though it was still above 50%.

##           A1819           A20           A21
## Min.      :19.20   Min.      :31.00   Min.      :33.30
## 1st Qu.:37.10   1st Qu.:54.27   1st Qu.:53.30
## Median :52.15   Median :61.25   Median :61.70
## Mean      :48.52   Mean      :61.06   Mean      :60.81
## 3rd Qu.:57.10   3rd Qu.:72.40   3rd Qu.:67.88
## Max.      :75.00   Max.      :82.40   Max.      :87.50
## NA's      :4      NA's      :22      NA's      :22
```

Yet again, the pre-COVID-19 average percentage of A's is similar to the overall percentage at that time. Though in the Liberal Arts classes, there was also about a 12% increase in percentage of A's given in spring 2020, and it did not really go back down in spring 2021. It was still above 60%. It is worth mentioning that the LA classes are comprised of PHIL, ENGL, and HIST. These are heavy paper based classes that could continue COVID procedures easily. MUSC on the other hand is a very in-person based curriculum. Also I would like to note that PHIL and MUSC had the highest averages of all classes observed.

Analysis of DF grades

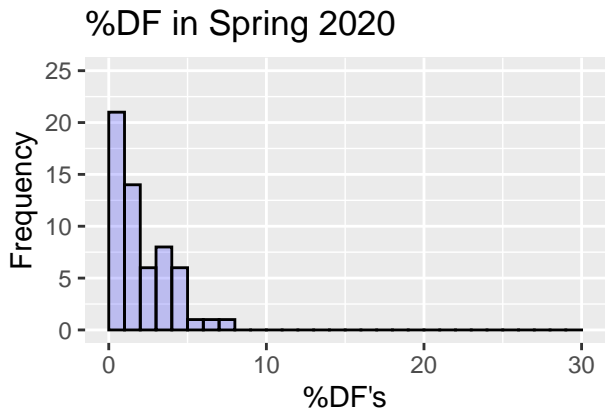

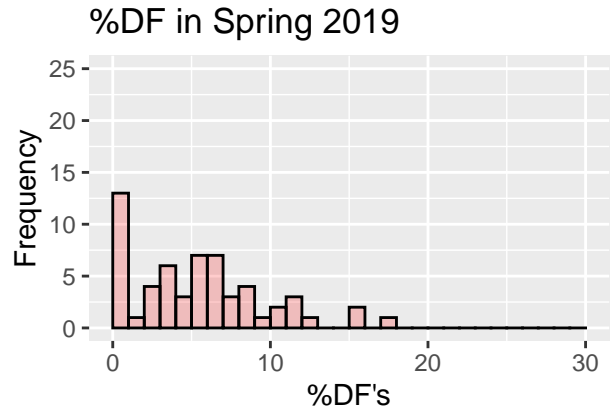

We found that in almost every subset we made of the overall data, there were significantly less DF grades given in spring 2020, compared to the previous spring semesters. Here is the overall distribution.

Spring DF

```
##           Df Sum Sq Mean Sq F value    Pr(>F)
## ind           2     591   295.58   15.88 3.48e-07 ***
## Residuals  228   4243    18.61
## ---
## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
## 225 observations deleted due to missingness

## Tukey multiple comparisons of means
## 95% family-wise confidence level
##
## Fit: aov(formula = values ~ ind, data = cgroups)
##
## $ind
##           diff           lwr           upr           p adj
## DF20-DF1819 -3.8878411 -5.526765 -2.2489174 0.0000002
## DF21-DF1819 -0.8637031 -2.502627  0.7752205 0.4290067
## DF21-DF20    3.0241379  1.134409  4.9138672 0.0005955

##           DF1819           DF20           DF21
## Min.      : 0.00   Min.      :0.000   Min.      : 0.000
## 1st Qu.:  2.30   1st Qu.:0.550   1st Qu.:  1.675
## Median :  4.90   Median :1.600   Median :  4.450
## Mean      :  5.89   Mean      :2.002   Mean      :  5.026
## 3rd Qu.:  7.75   3rd Qu.:3.100   3rd Qu.:  7.750
## Max.      :25.70   Max.      :7.400   Max.      :20.000
## NA's     :37     NA's     :94     NA's     :94
```

Note the previous spring semesters averaged about 6% DF grades, while spring 2020 had 2% DF grades. Then in spring 2021, it goes back to seemingly normal at 5%. This change was contributed to by the lower level, upper level, STEM, LA, and BC courses.

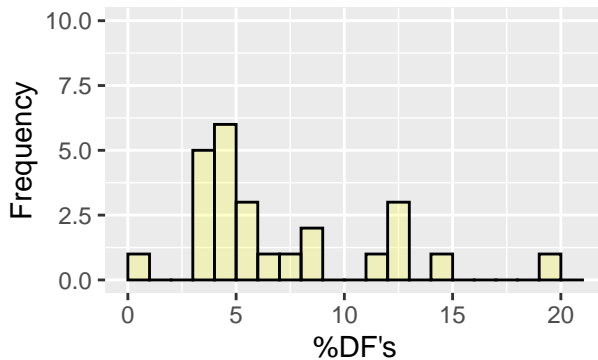

LL Spring DF

%DF STEM in Fall 2018

%DF STEM in Fall 2019

%DF STEM in Fall 2020

This was one of only two significant fall semester results. In the fall semester before COVID-19, there was an average STEM DF grade percentage of about 6%. Strangely enough, in fall of 2020, it went up to

about 10%. One reason this may be so is that undergraduate students at Georgia College are only allowed 5 withdrawal grades on their transcript(ones that do not count as a failure). We will see later in this paper that many students may have used some of their 5 withdrawals in spring 2020, so perhaps they felt like they could not spare another in fall 2020.

LA Spring DF

```

%DF LA in Spring 2018

%DF LA in Spring 2019

%DF LA in Spring 2020

%DF LA in Spring 2021

The Liberal Arts spring semesters also reflected a similar trend in their spring semesters. Before the pandemic, they averaged about 5% spring DF grades. Then in spring 2020, it drops to almost 2%. In spring 2021 it goes back up to about 5%.

LA Fall DF

```

%DF MC in Spring 2018

%DF MC in Spring 2019

%DF MC in Spring 2020

%DF MC in Spring 2021

The MC actually saw a very different result. Yes, spring 2020 was a little lower percentage of DF grades, but not significantly. The strange thing here is that in spring 2021, they experienced a spike in DF grades, which was substantially different from spring 2020, but only slightly higher than before the pandemic.

Analysis of WI grades

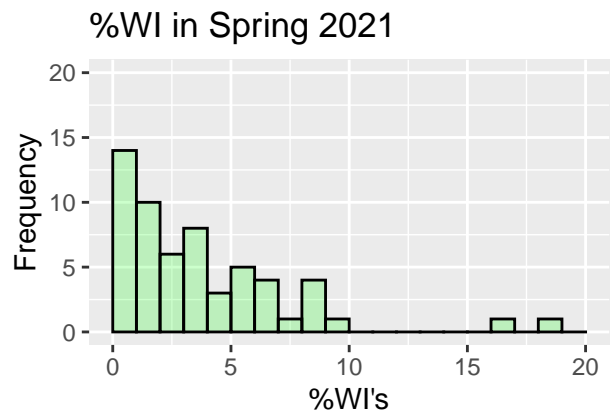

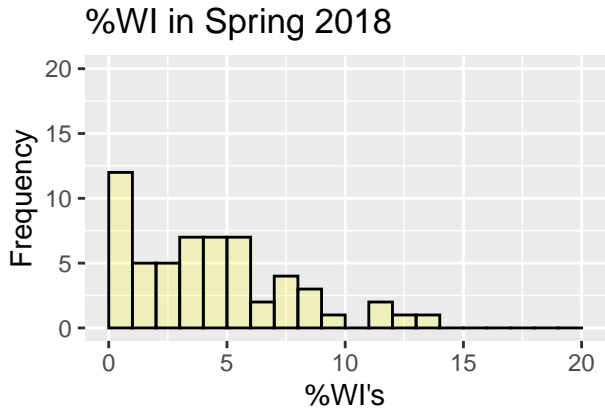

Overall, spring 2020 had significantly more WI grades than spring 2021.

Spring WI

```
##           Df Sum Sq Mean Sq F value Pr(>F)
## ind           2    98.2   49.09   3.864 0.0224 *
## Residuals  228 2897.0   12.71
## ---
## Signif. codes:  0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1
## 225 observations deleted due to missingness

## Tukey multiple comparisons of means
## 95% family-wise confidence level
##
## Fit: aov(formula = values ~ ind, data = cgroups)
##
## $ind
##           diff           lwr           upr           p adj
## WI20-WI1819  1.2141319 -0.1401661  2.5684300 0.0890487
## WI21-WI1819 -0.5686267 -1.9229247  0.7856714 0.5835998
## WI21-WI20    -1.7827586 -3.3443058 -0.2212114 0.0206859

##           WI1819           WI20           WI21
## Min.      : 0.000   Min.      : 0.000   Min.      : 0.000
## 1st Qu.:  1.900   1st Qu.:  2.125   1st Qu.:  1.225
## Median :  3.800   Median :  5.000   Median :  2.800
## Mean      :  4.231   Mean      :  5.445   Mean      :  3.662
## 3rd Qu.:  6.100   3rd Qu.:  7.300   3rd Qu.:  5.475
## Max.      :13.500   Max.      :17.100   Max.      :19.000
## NA's     :37       NA's     :94       NA's     :94
```

In spring 2020, there were about 5.5% WI grades given. In spring 2021, it dropped to about 3.5%. This drop seems to have been influenced by the UL and LA courses.

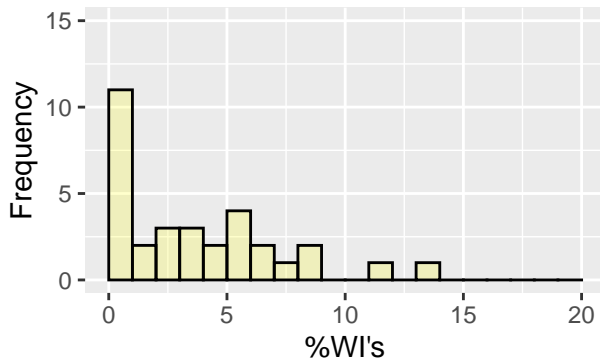

UL Spring WI

%WI LA in Spring 2018

%WI LA in Spring 2019

%WI LA in Spring 2020

%WI LA in Spring 2021

The LA classes show a similar trend to the UL classes above. In spring 2020, about 5% of LA grades were WI. In spring 2021, it dropped to about 2.5%.

Merit Lists

Apart of the analysis included tracking how many students made the GC Dean's List and President's List. According to Georgia College's website, these lists are defined as;

Dean's List: Students who make a term average of at least 3.5 on 12 or more semester hours at Georgia College are included on the Dean's List. Students may not have an "I" or "F" or "WF" during the semester.

President's List: Students who make a term average of 4.0 on 12 or more semester hours at Georgia College are included on the President's List. Students may not have a grade of "I" or "F" or "WF" during the semester.

Due to the frustrating design of the GCmerit website, the following data is an approximation of the total number of students who made the Dean's List and President's List from spring 2018, to spring 2021.

##	2018	2019	2020	2021
## Spring	1161-1170	1221-1230	1451-1460	1181-1190
## Fall	1341-1350	1361-1370	1131-1140	NA

##	2018	2019	2020	2021
## Spring	781-790	751-760	1161-1170	901-910
## Fall	741-750	771-780	831-840	NA

Here is the approximate difference between them.

##	18-19	18-20	18-21	19-20	19-21	20-21
## Spring	+5%	+29.9%	+1.7%	+18.8%	-3.3%	-18.6%
## Fall	+1.5%	-15.6%	NA	-16.8%	NA	NA

##	18-19	18-20	18-21	19-20	19-21	20-21
## Spring	-3.8%	+48.4%	+15.3%	+54.3%	+19.9%	-22.3%
## Fall	+4%	+12.1%	NA	+7.7%	NA	NA

In both the Dean and President's lists, there is a substantial spike from spring 2018 to 2020, and spring 2019 to 2020. Also, notice that in both lists, a substantial decrease from spring 2020 to 2021, back down to a number similar to before spring 2020. The fall semesters do not reflect the same pattern.

Conclusions

The data really tells the story of COVID-19 in the Georgia College grade books. Professors and students were faced with a new obstacle and very little time to accommodate. As a result, professors either had to make assignments easier by making them open notes, or trusting in their students to not cheat. Some professors also likely felt that they could not punish student's grades for their lack of understanding online utilities or the events of the COVID-19 pandemic and its effect on student abilities. Consequently, it would appear these factors lead to a decrease in failing grades in spring 2020. The data supports this conclusion across almost every subset of classes.

The data also suggest that in spring 2020, there was an increase in A grades, and consequently semester GPAs for many students. This result is supported by the increased percentage of A grades in the overall classes, lower level classes, and Liberal Arts classes. It may be that in lower level classes, professors felt more compassion on these students since they are mostly populated by first or second year students who are still new to college, let alone online procedures. The result is also supported by the spike in number of students who made the Dean and President's lists in spring 2020. It is worth noting that in fall 2020, STEM and LA classes saw an increase in DF grades, perhaps attributed to the limited withdrawal policy.

Even though there were no were results to say the number of WI grades significantly increased in spring 2020, the data shows that there was a significant decrease in these grades in spring 2021 compared to spring 2020. So they seemed to reflect a pattern of "high-low-high". Overall, it would appear that spring 2020 was a very different semester. But the student and faculty at Georgia College and State University appear to have made good adjustments post spring 2020 to accommodate online learning in a difficult time. In most subsets, the grade distributions in spring 2021 looked very similar to the spring semesters before hand. Also the fall 2020 saw almost no significant difference in comparison to the previous fall semesters.
