

College of Education Center for Educational Innovation

Goal: to use the latest technology to prepare teachers for changes in how we educate K-12 students.

Virtual Reality Classroom Set

\$10,000 each (5 are needed)

This is for preservice teachers to use virtual reality (VR) and augmented reality (AR) with preservice teachers so they can gain critical skills before they actually enter a classroom. VR will provide a virtual classroom where our students can practice teach, complete behavioral exercises, and gain valuable experience in a virtual world as opposed to a real classroom.

Graduates will also be able to go into a classroom and assist children as they explore and learn. There are many ways to explore such as Google Expeditions where students can do virtual field trips worldwide.
